

You'd be sad, too, if most of the money going into the electric power grid still missed the mark

By now you know that America's electric power grid is inefficient and unreliable—and that stimulus dollars have been designated for its upgrade. Unfortunately, focusing on costly new transmission lines expands the infrastructure rather than fixes it. The real economic opportunities lie in adding smart technology and clean generation to the local power distribution system, and in eliminating regulatory barriers that prevent private sector entrepreneurs from investing in these improvements.
